66degrees

Dear Hiring Manager

I am writing to express my strong interest in the Front-End Developer position at **Ericsson**, as advertised. With a solid foundation in software development, a strong user-centric design philosophy, and hands-on experience in modern JavaScript frameworks such as **React.js, Vue.js, and Node.js**, I am confident in my ability to contribute meaningfully to your team and mission of building boundary-pushing digital solutions.

During my recent internship at **CoinDCX**, I implemented real-time features in a production-grade Flutter application using the MVVM pattern and integrated secure blockchain APIs, enhancing the overall user experience and reliability. Prior to that, I developed scalable web applications and AI-powered platforms such as **JuriScan**, a legal document analysis tool built using **React, Flask, and PostgreSQL with pgvector**, which showcases my full-stack development skills and understanding of RAG-based systems.

I am well-versed with **Agile methodology**, collaborative cross-functional workflows, and have regularly worked in CI/CD environments using Git and VS Code. In addition, my personal projects involving **LSTM-based stock prediction** and **Flutter-based location tracking** highlight my passion for designing functional and intuitive front-end solutions that solve real-world problems.

I am eager to join **66degree's innovative and diverse team**, where I can further refine my craft, contribute to future-facing technologies, and help shape exceptional user experiences.

Thank you for considering my application. I look forward to the opportunity to discuss how my skills and enthusiasm align with Ericsson's goals.

Warm regards,

Rohan Gaikwad
